
Eva Abou Harb

Applied AI & Robotics Student · Houston Community College

Building intelligent systems that solve real-world problems through AI and automation. Specializing in Artificial Intelligence, Natural Language Processing, Machine Learning, and AI System Development.

GITHUB PORTFOLIO

github.com/Evaabou20/Eva-AbouHarb-AI-Portfolio

Made with GAMMA

Midterm Project: NewsBot Foundation

Developed an NLP-powered system to analyze and classify news articles — establishing the technical groundwork for the final platform.

Core Features

- Text preprocessing & cleaning
- Sentiment Analysis
- Named Entity Recognition
- Syntactic Analysis via spaCy
- ML Classification

0.78

Model Accuracy

Classification performance on news article categories

Made with GAMMA

Final Project: NewsBot Intelligence System 2.0

Expanded the midterm foundation into a production-ready NLP platform — transforming raw news into structured, actionable insights.

Topic Modeling (LDA)

Discovers hidden thematic structures across large news corpora

Text Summarization

Condenses long articles into concise, meaningful summaries

Semantic Search

Understands meaning, not just keywords, for precise retrieval

Multilingual Intelligence

Processes and analyzes content across multiple languages

Conversational Interface

Interactive query layer for natural user engagement

Improved Architecture

Scalable, modular design for production-grade reliability

Made with GAMMA

Skills & Competencies

This project strengthened both deep technical expertise and professional readiness for real-world AI development.

Technical Skills

- Python Programming
- Natural Language Processing
- Transformers (Hugging Face)
- spaCy & Scikit-learn
- Data Analysis & Visualization

Professional Skills

- Independent Project Management
- Problem Solving
- Documentation & Reporting
- Presentation & Communication
- Business-Oriented AI Thinking

Made with GAMMA

Reflection & Future Goals

This project provided end-to-end experience in building AI systems — from concept to implementation to delivery.

Technical + Business Thinking

AI projects succeed when model quality meets real-world value

System Integration Matters

Architecture and integration are as critical as model accuracy

Documentation = Professionalism

Clear documentation is as important as the code itself

Next Steps: Build real-world AI applications · Expand into robotics & automation · Continue growing a portfolio of production-quality AI systems.
